

S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR

Practical 02

Aim: To understand and demonstrate the use of basic commands in different operating systems (Windows, Linux, and UNIX) for managing files, directories, permissions, and user interactions through a terminal or command-line interface.

Name: SRUSHTI SURENDRA KURVE

USN: CD24054

Semester / Year: 4TH/2ND

Academic Session: 2025-26

Date of Performance:

Date of Submission:

- 9 Aim: To understand and demonstrate the use of basic commands in different operating systems (Windows, Linux, and UNIX) for managing files, directories, permissions, and user interactions through a terminal or command-line interface.

❖ Objectives:

1. To learn and practice fundamental command-line operations for file and directory management.
2. To explore and utilize user and permission management commands effectively.
3. To enhance system administration skills by working with commands across different operating systems.

• 9 Requirements:

Hardware Requirements:

- Processor: Multi-core CPU, Intel Core i3 (3.0 GHz) or higher
- RAM Minimum 4 GB (8 GB recommended for optimal performance)
- Storage: 100 GB HDD or SSD (Solid State Drive) for faster access
- Network Interface: Ethernet or Wi-Fi adapter for connectivity

Software Requirements:

- Operating System: Windows 10/11, Linux (Ubuntu 20.04/CentOS 8), UNIX-based os
- Command-line Interface: PowerShell or Command Prompt (Windows), Terminal (Linux/UNIX)
- Text Editor: Nano, Vim, or Visual Studio Code for file editing
- Administrative Privileges: Superuser (Linux/UNIX) or Administrator (Windows) access

❖ Theory:

In system administration, command-line interfaces (CLI) are essential tools for managing and interacting with operating systems like Windows, Linux, and UNIX. Commands allow users to perform various tasks such as navigating directories, managing files, controlling permissions, and monitoring system performance. Each operating system provides a set of built-in commands, such as 'man', 'ls', 'cd', 'mkdir', and 'chmod', to facilitate efficient system management. Understanding these commands and their syntax is

crucial for automating tasks, enhancing security, and ensuring optimal system functionality. This practical aims to develop foundational skills in executing and applying basic commands across different platforms.

•9 Commands:

1 . Display User Manual of a Command

- Functionality: Shows the manual page with details about a command's usage, options, and arguments.
- Syntax: `man <command>`
- Example: `man ls`

2. Change Current Working Directory.

- Functionality: Changes the terminal 's current working directory.
- Syntax: `cd <directory-path>`
- Example: `cd /home/user/Documents`.

3. List Contents of the Current Directory.

- Functionality: Lists all files and directories in the current location.
- Syntax: `ls`
- Example: `ls`

4. Read/Modify/Concatenate Text Files.

- Functionality: Displays or manipulates file content.
- Syntax:
- Read: `cat <filename>`
- Modify: `'nano <filename>`
- Concatenate: `cat <file1> <file2> > <outputfile>`
-

5. Create a New Directory.

- Functionality: Creates a new directory at the specified path.
- Syntax: `mkdir <directory-name>`
- Example: `mkdir newdir`

6. Display Current Working Directory.

- Functionality: Prints the current directory path.
- Syntax: `pwd`
- Example: `pwd`

7. Write Arguments to Standard Output.

- Functionality: Prints the provided string or variables.
- Syntax: echo <arguments> - Example:

echo Hello World

8. Remove a File.

- Functionality: Deletes a specified file.
- Syntax: rm <filename>
- Example: rm file.txt

9. Delete a Directory.

- Functionality: Removes an empty directory.
- Syntax: rmdir <directory-name>
- Example: rmdir olldir

10. Copy a File or Directory.

- Functionality: Copies a file or directory to a destination.
- Syntax: cp <source> <destination> - Example: cp file.txt backup/

11. Switch to Root User.

- Functionality: Gains root privileges temporarily.
- Syntax: sudo su
- Example: sudo s

12. Move Files or Directories.

- Functionality: Moves or renames files and directories.
- Syntax: mv <source> <destination>
- Example: mv file.txt newdir/

13. Search for a String in a File.

- Functionality: Searches for a specific word or pattern in a file.
- Syntax: grep "<string>" <file> - Example: grep "error" log.txt

14. Print Top N Lines of a File.

- Functionality: Displays the first N lines of a file.
- Syntax: head -n <N> <file> - Example: 'head -n 10 file.txt'

15. Print Last N Lines of a File.

- Functionality: Displays the last N lines of a file.
- Syntax: tail -n <N> <file>

Example: 'tail -n 10 file.txt

16. Remove Read Permission from Owner.

- Functionality: Revokes the owner's read permission for a file.
- Syntax: chmod u-r <filename>
- Example: chmod u-r file.txt

17. Change Specific Permissions.

- Functionality: Sets or removes specific file permissions.
- Syntax: chmod u+r,w-x,g+w <filename>
- Example: chmod u+r,w-x,g+w file.txt

18. Add Write Permission to Owner, None to Others.

- Functionality: Allows write access for the owner only.
- Syntax: chmod u+w,o-rwx <filename>
- Example: chmod u+w,o-rwx file.txt

19. Assign Permissions to Users.

- Functionality: Modifies file access for users, groups, and others.
- Syntax: chmod u+rwx,g+rx,o+r <filename>
- Example: 'chmod u+rwx,g+rx,o+r file.txt

20. Assign R/W/X to Others.

- Functionality: Gives read, write, and execute permissions to others.
- Syntax: chmod o+rwx <filename>
- Example: chmod o+rwx file.txt

21. Remove All Permissions from All Users.

- Functionality: Clears all permissions on a file.
- Syntax: 'chmod a-rwx <filename>
- Example: 'chmod a-rwx file.txt

22. Remove Read Permission Using Absolute Mode.

- Functionality: Uses numeric mode to restrict read access.
- Syntax: chmod 700 <filename>
- Example: chmod 700 file.txt

23. Set R/W for Owner, None for Group/Other.

- Functionality: Assigns permissions in numeric mode.
- Syntax: chmod 600 <filename>
- Example: chmod 600 file.txt'

24. Add Execute for Owner, Read for Group/Others.

- Functionality: Adds execution and read access.
- Syntax: chmod u+x,g+r,o+r <filename>
- Example: chmod u+x,g+r,o+r file.txt

25. Add Execute Permission to All Users.

- Functionality: Enables execution by everyone.
- Syntax: chmod a+x <filename>
- Example: chmod a+x script. sh

❖ Conclusion: In conclusion, understanding and using essential operating system commands like 'ls', 'cd', 'cp', 'mv', and 'chmod' enables efficient file management, navigation, and permission control. Tools like 'grep', 'head', and 'tail' enhance data processing. Mastery of these commands improves system administration, task automation, and overall system security and performance.

• 9 Discussion Questions:

1. What is the significance of the pwd command in a Linux environment?

Answer: The pwd (print working directory) command displays the absolute path of the current working directory. It helps verify the user's present location in the file system. Syntax: pwd.

2. Explain the function of the cp command and its common options.

Answer: The cp command copies files or directories. Syntax: cp <source> <destination>. Options like -r copy directories recursively, and -i prompts before overwriting.

3.How does chmod 700 affect file permissions, and what does each digit represent?

Answer: chmod 700 grants full permissions (read, write, execute) to the owner and no permissions to others. The digits represent permissions for the owner, group, and others, respectively.

4.Describe the difference between head and tail commands in Linux.

Answer: The head command displays the first N lines of a file, while tail shows the last N lines. Both accept the -n option to specify the number of lines.

5.What is the purpose of the grep command, and how is it used with regular expressions?

Answer: The grep command searches for patterns within files using regular expressions. Syntax: grep <pattern> <file>. It supports options like -i for case-insensitive search and -v to invert the match.

OUTPUT:

1 . Display User Manual of a Command

```
C:\Users\user>help
For more information on a specific command, type HELP command-name
ASSOC      Displays or modifies file extension associations.
ATTRIB     Displays or changes file attributes.
BREAK      Sets or clears extended CTRL+C checking.
BCDEDIT    Sets properties in boot database to control boot loading.
CALCS      Displays or modifies access control lists (ACLs) of files.
CALL       Calls one batch program from another.
CD         Displays the name of or changes the current directory.
CHCP      Displays or sets the active code page number.
CHDIR     Displays the name of or changes the current directory.
CHKDSK    Checks a disk and displays a status report.
CHKNTFS   Displays or modifies the checking of disk at boot time.
CLS        Clears the screen.
CMD        Starts a new instance of the Windows command interpreter.
COLOR      Sets the default console foreground and background colors.
COMP      Compares the contents of two files or sets of files.
COMPACT    Displays or alters the compression of files on NTFS partitions.
CONVERT   Converts FAT volumes to NTFS. You cannot convert the
          current drive.
COPY       Copies one or more files to another location.
DATE      Displays or sets the date.
DEL        Deletes one or more files.
DIR        Displays a list of files and subdirectories in a directory.
DISKPART   Displays or configures Disk Partition properties.
DOSKEY    Edits command lines, recalls Windows commands, and
          creates macros.
DRIVERQUERY Displays current device driver status and properties.
ECHO       Displays messages, or turns command echoing on or off.
ENDLOCAL   Ends localization of environment changes in a batch file.
ERASE     Deletes one or more files.
EXIT      Quits the CMD.EXE program (command interpreter).
FC         Compares two files or sets of files, and displays the
          differences between them.
FIND      Searches for a text string in a file or files.
FINDSTR   Searches for strings in files.
FOR       Runs a specified command for each file in a set of files.
FORMAT   Formats a disk for use with Windows.

C:\Users\user>
```

```
FTYPE     Displays or modifies file types used in file extension
          associations.
GOTO      Directs the Windows command interpreter to a labeled line in
          a batch program.
GPRESLT  Displays Group Policy information for machine or user.
HELP     Provides Help information for Windows commands.
ICALCS   Display, modify, backup, or restore ACLs for files and
          directories.
IF       Performs conditional processing in batch programs.
LABEL   Creates, changes, or deletes the volume label of a disk.
MD      Creates a directory.
MKDIR   Creates a directory.
MVLINK  Creates Symbolic Links and Hard Links
MODE    Configures a system device.
MORE    Displays output one screen at a time.
MOVE    Moves one or more files from one directory to another
          directory.
OPENFILES Displays files opened by remote users for a file share.
PATH    Displays or sets a search path for executable files.
PAUSE   Suspends processing of a batch file and displays a message.
POPD   Restores the previous value of the current directory saved by
          PUSHD.
PRINT   Prints a text file.
PROMPT  Changes the Windows command prompt.
PUSHD   Saves the current directory then changes it.
RD     Removes a directory.
RECOVER Recovers readable information from a bad or defective disk.
REM    Records comments (remarks) in batch files or CONFIG.SYS.
REN    Renames a file or files.
RENAME  Renames a file or files.
REPLACE Replaces files.
RMDIR   Removes a directory.
ROBOCOPY Advanced utility to copy files and directory trees
SET     Displays, sets, or removes Windows environment variables.
SETLOCAL Begins localization of environment changes in a batch file.
SC      Displays or configures services (background processes).
SCHTASKS Schedules commands and programs to run on a computer.
SHIFT   Shifts the position of replaceable parameters in batch files.
SHUTDOWN Allows proper local or remote shutdown of machine.
SORT    Sorts input.
START   Starts a separate window to run a specified program or command.

C:\Users\user>
```

```

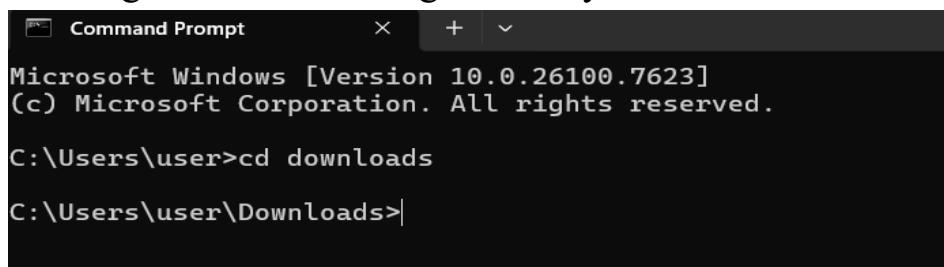

SETLOCAL   Begins localization of environment changes in a batch file.
SC        Displays or configures services (background processes).
SCHTASKS  Schedules commands and programs to run on a computer.
SHIFT     Shifts the position of replaceable parameters in batch files.
SHUTDOWN  Allows proper local or remote shutdown of machine.
SORT      Sorts input.
START    Starts a separate window to run a specified program or command.
SUBST    Associates a path with a drive letter.
SYSTEMINFO Displays machine specific properties and configuration.
TASKLIST  Displays all currently running tasks including services.
TASKKILL  Kill or stop a running process or application.
TIME      Displays or sets the system time.
TITLE     Sets the window title for a CMD.EXE session.
TREE      Graphically displays the directory structure of a drive or
          path.
TYPE      Displays the contents of a text file.
VER       Displays the Windows version.
VERIFY    Tells Windows whether to verify that your files are written
          correctly to a disk.
VOL      Displays a disk volume label and serial number.
XCOPY    Copies files and directory trees.
WMIC     Displays WMI information inside interactive command shell.

For more information on tools see the command-line reference in the online help.

```

10. Copy a File or Directory

```
C:\Users\user>echo This is a test file > file1.txt

C:\Users\user>copy file1.txt copyfile1.txt
 1 file(s) copied.
```

11. Switch to Root User.

The screenshot shows a Command Prompt window titled "Command Prompt". The user runs the command "runas /user:administrator cmd". It prompts for the password for the administrator account. The user enters the password, but the system returns an error message: "RUNAS ERROR: Unable to run - cmd" and "1326: The user name or password is incorrect." The command prompt then returns to the user's Downloads directory.

```
C:\Users\user\Downloads>runas /user:administrator cmd
Enter the password for administrator:
Attempting to start cmd as user "KURVE\administrator" ...
RUNAS ERROR: Unable to run - cmd
1326: The user name or password is incorrect.

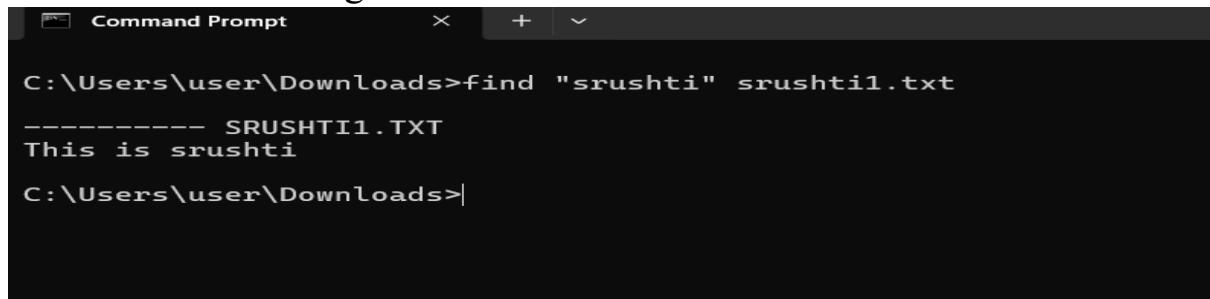

C:\Users\user\Downloads>
```

12. Move Files or Directories.

```
C:\Users\user\Downloads>move srujan.txt "D:\ドキュメント"
 1 file(s) moved.

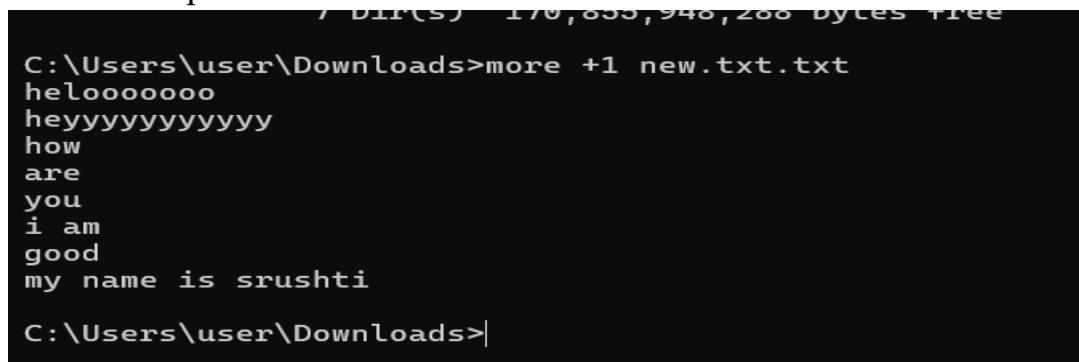

C:\Users\user\Downloads>
```

13. Search for a String in a File.

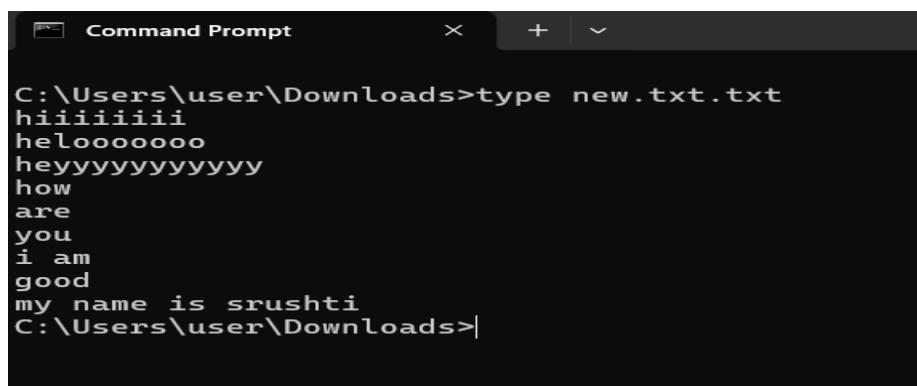

```
C:\Users\user\Downloads>find "srushti" sruhtil.txt
----- SRUSHTI1.TXT
This is sruht
C:\Users\user\Downloads>
```

14. Print Top N Lines of a File.

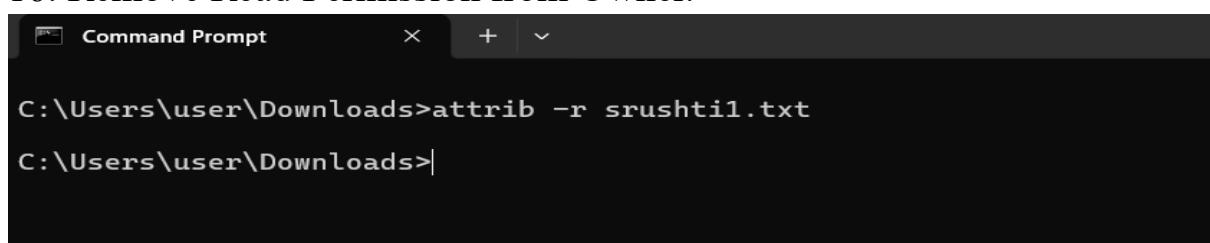

```
7 Dir(s) 170,855,948,288 bytes free
C:\Users\user\Downloads>more +1 new.txt.txt
heooooooo
heyyyyyyyyy
how
are
you
i am
good
my name is sruht
C:\Users\user\Downloads>
```

15. Print Last N Lines of a File

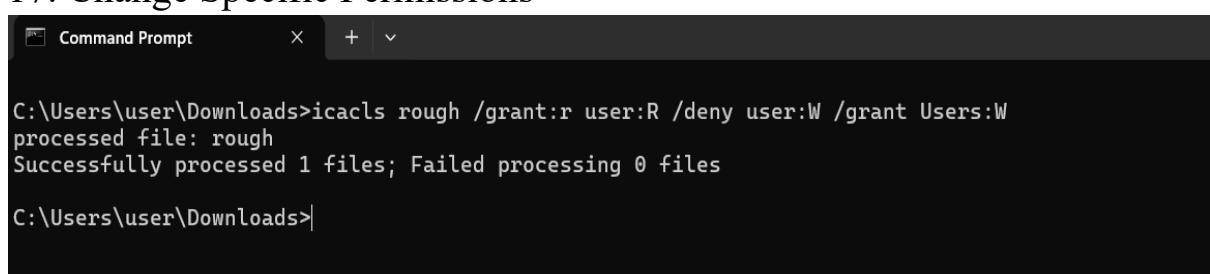

```
C:\Users\user\Downloads>type new.txt.txt
hiiiiiii
heooooooo
heyyyyyyyyy
how
are
you
i am
good
my name is sruht
C:\Users\user\Downloads>
```

16. Remove Read Permission from Owner.

```
C:\Users\user\Downloads>attrib -r sruhtil.txt
C:\Users\user\Downloads>
```

17. Change Specific Permissions

```
C:\Users\user\Downloads>icacls rough /grant:r user:R /deny user:W /grant Users:W
processed file: rough
Successfully processed 1 files; Failed processing 0 files
C:\Users\user\Downloads>
```

18. Add Write Permission to Owner, None to Others.

```
Command Prompt x + ▾

C:\Users\user\Downloads>icacls rough /grant user:W /inheritance:r /remove Users Everyone
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

19. Assign Permissions to Users.

```
C:\Users\user\Downloads>icacls rough /grant Users:F
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

20. Assign R/W/X to Others.

```
C:\Users\user\Downloads>icacls rough /grant Everyone:(R,W,X)
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

21. Remove All Permissions from All Users.

```
Command Prompt x + ▾

C:\Users\user\Downloads>icacls rough /inheritance:r /remove Users Everyone
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

22. Remove Read Permission Using Absolute Mode

```
C:\Users\user\Downloads>icacls rough /deny user:R
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

23. Set R/W for Owner, None for Group/Other.

```
C:\Users\user\Downloads>icacls rough /inheritance:r /grant user:RW /remove Users Everyone
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

24. Add Execute for Owner, Read for Group/Others.

```
C:\Users\user\Downloads>icacls rough /grant user:RX /grant Users:R /grant Everyone:R
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```

25. Add Execute Permission to All Users.

```
C:\Users\user\Downloads>icacls rough /grant Users:RX
processed file: rough
Successfully processed 1 files; Failed processing 0 files
```
